

RADIANT BIOMETRICS SOLUTION

Controlling costs and improving security are all challenges today's restaurant owners face. No matter what type of restaurant you own, it's important to have the technology in place to effectively manage these challenges and lengthen the lifetime of your investments. Radiant's biometric solution provides biometric ID identification for employee functions including cashier logon and manager override. Our biometrics solution improves security through absolute user identification and reduces the threat of employee fraud by eliminating the ability to share employee ID cards and passwords. Using the biometric solution also increases the life of your technology by reducing the number of times an employee uses the corner of an identification card to type in an order on the POS touch screen.

▶ IMPROVE SECURITY

Eliminate unauthorized transactions and ensure properly authenticated manager overrides.

▶ ELIMINATE EMPLOYEE IMPERSONATION

Replace identification cards and passwords with the touch of an employee's finger to positively establish identity.

▶ REDUCE ADMINISTRATION

Benefit from one-time enrollment of hundreds of employees in your system and easy removal of any employees who leave your company. Synchronization is instantaneous across all biometrics-equipped terminals upon enrollment.

▶ ENFORCE TIME & ATTENDANCE

Decrease fraud by eliminating the possibility of your employees sharing passwords or identity cards.

▶ CUSTOMIZE TO FIT YOUR NEEDS

Configure your system at the individual employee level as appropriate for your restaurant environment - always require a fingerprint, require a fingerprint only at clockin or only require a fingerprint for manager approvals and logins.
